Investment objective overview

FFBH Vostok is a high-yield, actively managed, open-end mutual fund with regional focus on Russia & CIS, incepted on Apr 16, 2010. The Fund's investment objective is to achieve high long-term growth, bearing medium to high level of risk. The Fund may have up to 95% in equities and up to 50% invested in bonds.

We assume further recovery of the Russian economy in 2021, supported by several key rate cuts and relatively stable oil prices, and prefer higher allocation to equities and cyclical sectors. The portfolio remains comprised mainly of blue chip companies with leading and stable market positions.

Investment strategy

FIB Avangard is a high-yield, actively managed, mutual fund, inception on Nov 11, 2007, whose investment objective is to achieve high long-term growth, bearing medium to high level of risk. Its portfolio is allocated into global equity with regional focus on Bulgaria. Tactically, most of its funds might be invested in capital markets outside Bulgaria that are expected to be among top performing world regions.

FIB Avangard's investment strategy for 2021 includes allocation to export-oriented, financially stable and dividend-paying Bulgarian companies and allocation to developed markets blue chips based on favourable macroeconomic conditions and attractive valuations. We will increase exposure to companies with competitive positions in disruptive industries. The overall risk of the portfolio will be mitigated through sector and company diversification.

Investment strategy

FIB Classic is a balanced mutual fund, inception on Nov 11, 2007, whose investment objective is to achieve medium to high long-term growth of its assets, bearing medium level of risk. The Fund invests in equities and bonds, as the equity-bond proportion depends on the stage of the economic cycle and macro conditions in covered regions and the expected central banks' monetary policy decisions.

FIB Classic's investment strategy for 2021 remains equity-focused, which includes holding equity allocation close to the fund's limits. Equities will be concentrated in Bulgaria and Western Europe with preference to dividend-paying value companies. Bond portfolio would comprise of domestic and foreign corporate bonds.

Investment objective

FIB Garant is a conservative mutual fund, inception on Nov 11, 2007, whose investment objective is to achieve medium long-term growth of its assets, bearing low level of risk. The Fund invests mainly in fixed-income and money market instruments, but it may have up to 20% exposure to equity used to improve its risk-return profile.

FIB Garant's 2021 investment strategy includes significant allocation to Bulgarian equities on valuations and sentiment improvement on the BSE. At certain points investments in foreign large cap dividend-paying blue chips can be made but currency risk should be controlled. Low local deposit rates would also lead to an increase in the Fund's exposure to foreign corporate and sovereign bonds.

PORTFOLIO MANAGER'S COMMENT March 2021

MARKET OVERVIEW:

In March 2021 the financial markets resumed their up-trend due to the expectations for solid economic recovery with advancing vaccination of the population and improving economic data.

In the US the package for 1.9 trillion dollars stimulus for supporting the households and businesses, proposed by the President, was approved by the Congress and the active administering of vaccines continued.

In Europe the number of infections rose and many member-states re-introduced restrictive measures. In the meantime manufacturing and services PMI data improved and increased for the first time in 6 months.

US: S&P 500 increased by 4.24% MoM and NASDAQ 100 increased by 1.41% MoM in USD, with larger changes in EUR (increase of 7.39% MoM and increase of 4.47% MoM). The GDP rose by 4.3% in Q4 2020. The core inflation decreased to 1.3% YoY in February. The unemployment rate decreases to 6.0% in March.

During the month the rotation from technology stocks to cyclical stocks continued due to increased expectations for a new economic growth cycle and increasing inflation. The labor market continued to recover and the economy created over 1.5 million jobs in Q1 mainly in the hospitality and leisure industry, the private and public education and in the construction industry. The manufacturing and services PMI data improved and crossed into expansion territory. Retail sales and industrial production also increased in Q1. The Federal Reserve left the monetary policy unchanged at its meeting and confirmed the pace of asset purchases at 120 billion dollars per month. The quarterly economic projections were revised upwards to 6.5% GDP growth in 2021, 4.5% unemployment rate, 2.2% core inflation and the federal funds rate is expected to be maintained unchanged to at least 2023. The Chairman of the Federal Reserve confirmed his expectations for increased inflationary pressures in the economy due to the increasing economic growth, but in his view they likely won't lead to interest rate hikes any time soon.

The government bond market continued to decline due to the increased inflation expectations and the 10y Treasury yield increased to 1.74%. The US dollar appreciated against the major currencies and closed around 1.1721 against the euro.

EUROPE: MSCI Europe increased by 6.09% MoM. The GDP in the Eurozone fell by 0.7% in Q4 2020. The core inflation decreased substantially to 0.9% YoY in March. The unemployment rate was stable at 8.3% in February.

The European economies continued to operate under restrictions due to the pandemic. The manufacturing and services PMI data improved and crossed into expansion territory. Retail sales declined whereas the industrial production was unchanged.

The ECB left the monetary policy unchanged at its meeting but confirmed a substantial increase in the asset purchases in Q2 due to the general increase in market interest rates.

The demand for risk-free assets increased and the 10y German Bund yield fell, closing around -0.29%.

RUSSIA: MSCI Russia increased by 5.21% MoM in USD and increased by 8.38% in EUR. The GDP rose by 13.0% in Q3 2020. The inflation rate increased to 5.04% YoY in February. The unemployment rate fell to 5.7% in February. The Brent oil price declined to USD 63.54 per barrel (decrease of 1.37% MoM).

OPEC+ decided to maintain the production output unchanged in April and Saudi Arabia extended its voluntary production cut of 1 million barrels per day for another month.

The economy continued to recover due to the general increase of the commodities prices on the international markets but the industrial production declined.

The Central Bank of the Russian Federation increased its key rate by 0.25% to 4.50% at its meeting, reiterating the rising inflation and the recovery in the demand. The return to neutral monetary policy will take into account the inflation dynamic, domestic and foreign risks as well as the general state of the financial markets. The Central Bank expects reaching the inflation goal of 4.00% in H1 2022.

The Russian currency depreciated and closed around 75.69 rubbles per dollar.

BULGARIA: SOFIX increased by 1.35% and BGTR30 decreased by 0.67%. The GDP rose by 2.2% in Q4 2020. The inflation rate (HICP) increased to 0.2% YoY in February. The seasonally-adjusted unemployment increased to 5.5% in January.

The economy continued to operate under restrictions whereas the preventive measures led to positive results in the pandemic management. The industrial production and the retail sales increased. The World Bank lowered its economic growth forecast for the country to 2.6% in 2021.

OUTLOOK:

The global economy continues to recover from the pandemic related decline. The recovery depends on the path of the virus and the vaccination process. The financial markets are expecting strong corporate financial results and the beginning of a new cycle in the economic growth where the technology sector and the cyclical sectors remain preferred by the investors. The governments and central banks are firmly committed to maintaining the fiscal and monetary stimulus aiming at sustainable economic recovery.

PORTFOLIO ALLOCATIONS:

Mutual fund	Return MoM, %	Equity allocation, %	MoM change in allocation
FFBH Vostok	5.45%	62.74%	Increased equity exposure to exchange-traded products on market indices, reduced equity exposure to the metals and mining sector
FIB Avangard	1.87%	66.08%	Increased equity exposure to exchange-traded products on technology market indices
FIB Classic	1.56%	37.96%	No significant changes
FIB Garant	0.16%	15.50%	No significant changes

NOTES

Monthly return /MoM/ is calculated as the ratio between the NAV/share as per the report date and the NAV per share on the last working day of the previous month.

Annual return /YoY/ is calculated as the ratio between the NAV/share as per the report date and the NAV per share on the last working day of the same month a year ago.

Year-to-date return /YtD/ is calculated as the ratio between the NAV/share as per the report date and the NAV per share on the last working day of the previous year.

Standard deviation is the annualized standard deviation of the weekly return over the last five years or since inception, whichever is smaller.

FIB Avangard: Monthly Alpha – MSCI ACWI is the difference between the monthly return of NAV per share of FIB Avangard and the monthly return of MSCI All Country World Index.

FIB Classic: Monthly Alpha – MSCI ACWI is the difference between the monthly return of NAV per share of FIB Classic and the monthly return of MSCI All Country World Index.

FFBH Vostok: Monthly Alpha – MSCI Russia is the difference between the monthly return of NAV per share of FFBH Vostok and the monthly return of MSCI Russia 10/40 Total Return EUR Index.

FIB Avangard: Beta (β) – MSCI ACWI has been calculated using the weekly returns of NAV per share of FIB Avangard and MSCI All Country World Index over the last five years.

FIB Classic: Beta (β) – MSCI ACWI has been calculated using the weekly returns of NAV per share of FIB Classic and MSCI All Country World Index over the last five years.

FFBH Vostok: Beta (β) – MSCI Russia has been calculated using the weekly returns of NAV per share of FFBH Vostok and MSCI Russia 10/40 Total Return EUR Index over the last five years.

FIB Avangard: R2 – MSCI ACWI has been calculated using the weekly returns of NAV per share of FIB Avangard and MSCI All Country World Index over the last five years.

FIB Classic: R2 – MSCI ACWI has been calculated using the weekly returns of NAV per share of FIB Classic and MSCI All Country World Index over the last five years.

FFBH Vostok: R2 – MSCI Russia has been calculated using the weekly returns of NAV per share of FFBH Vostok and MSCI Russia 10/40 Total Return EUR Index over the last five years.

Returns of all indices presented in the bulletin or used in the calculations above are converted in BGN.

Sharpe Ratio for all funds has been calculated using the weekly returns of NAV per share of each fund over the last five years or since the inception of the fund, whichever is smaller, and using 0% as risk-free return.

FIB Avangard: High-yield market average is calculated through equal weighting of the returns of all high-yield mutual funds, offered on the Bulgarian market by asset management companies - members of the Bulgarian Association of Asset Management Companies (BAAMC).

FIB Classic: Balanced yield market average is calculated through equal weighting of the returns of all balanced mutual funds, offered on the Bulgarian market by asset management companies - members of BAAMC.

FIB Garant: Low-yield market average is calculated through equal weighting of the returns of all conservative mutual funds, offered on the Bulgarian market by asset management companies - members of BAAMC. Money market funds are not included in the calculation.

FFBH Vostok: High-yield market average is calculated through equal weighting of the returns of all high-yield mutual funds, offered on the Bulgarian market by asset management companies - members of BAAMC.

Returns are calculated using the net asset values of the mutual funds reported on the web site of BAAMC on the first working day of the month, following the month of performance presentation.

The market average points are calculated in a standardized way, using the MoM, YoY and YtD returns of each fund (R_i , $i=1$ to n), based on formula: $\sum (1/n \cdot R_i)$, where n is the number of mutual funds.
